Response to Final Office Action

AMENDMENT TO THE CLAIMS

16. (Previously Presented) A system for locating and tracking a wireless device, the system comprising:

a database remotely located from the wireless device, the database operable for receiving and storing position information from the wireless device at a predetermined interval;

a wireless network operable for communicating the position information from the wireless device to the database;

a first algorithm for providing the position information; and

a second algorithm operable for causing the position information to be communicated to the database via the wireless network when battery power of the wireless device reaches a predetermined level.

33. (Previously Presented) A method for locating and tracking a wireless device, the method comprising:

at a predetermined interval, receiving position information from the wireless device via a wireless network;

storing the position information in a database, the database remotely located from the wireless device;

upon request, providing the position information; and

causing the position information to be communicated to the database via the wireless network when battery power of the wireless device reaches a predetermined level.

35. (Previously Presented) A system according to claim 16, wherein the second algorithm estimates the battery power of the wireless device.
